1 How to read this Guide

This guide contains the procedure for commanding NJR-P01UF/NJR-P01UC (hereafter referred to as “NJR-P”) via RS-232C communication or LAN communication. The NJR-P01UF-T and NJR-P01UC-T refer to encoders while the NJR-P01UF-R and NJR-P01UC-R refer to decoders.
If other IP-NINJAR series products are connected, refer to each User Guide.

2 About this Guide

This guide contains the procedure for controlling NJR-P using commands via RS-232C communication or LAN communication.

■ **Communication commands enable the following main operations:**

- Setting input, output, and audio
- Setting EDID
- Displaying information

3 Communication configuration and Specifications

3.1 RS-232C communication

The NJR-P can be accessed and controlled via RS-232C communication.
Connecting a control device to the NJR-P's RS-232C connectors enables system control and status queries per the Command List.

3.1.1 Setting up RS-232C communication

Follow the procedure below.

(1) Connect the control device to the RS-232C connector of the NJR-P through an RS-232C cable.
(2) Set the DIP switch 1 to "ON".
(3) See the control device according to "**[Table 3.1] RS-232C specification**".
(4) Send communication command from the control device to the NJR-P.
You can control the NJR-P and get the status information using communication command.

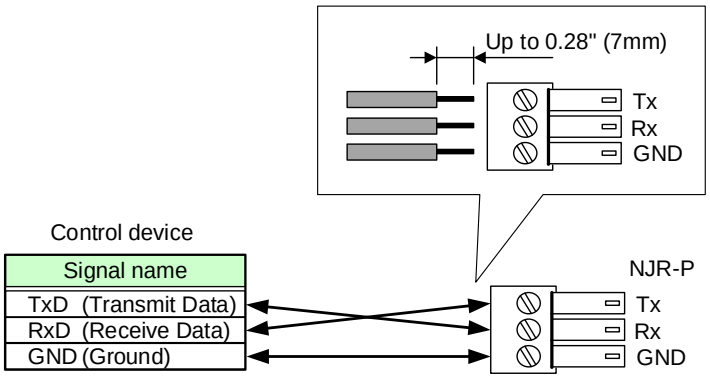
3.1.2 RS-232C connector specification

Insert and secure the wires from the RS-232C cable into the supplied 3-pin captive screw connector, and then insert the captive screw connector into the mating connector on the NJR-P.
28 AWG to 16 AWG conductor gauge is recommended. The recommended wire strip length is 0.28 in. (7 mm).
Short RTS/CTS and DTR/DSR as needed.



[Fig. 3.2] RS-232C connector

3.1.3 RS-232C communication specification

There are two RS-232C modes: control mode (setting NJR-P) and communication mode (controlling peripheral devices). Values for the former mode are fixed as follows and cannot be changed; values for the latter mode are settable.

【See: 4.5.2.6 RS-232C】

[Table 3.1] RS-232C specification

Compliant standard	RS-232C
Baud rate	9600 [bps]
Data bit length	8 [bit]
Parity check	None
Stop bit	1 [bit]

Flow control	None
Communication method	Full duplex

3.2 LAN communication

The NJR-P can be accessed and controlled through LAN communication.
Connecting a control device to the NJR-P's LAN connector enables system control and status queries using the IP-NINJAR Configurator (configuration software for IP-NINJAR).
For operations from the IP-NINJAR Configurator, refer to the User Guide of IP-NINJAR Configurator.
Please contact us to download the IP-NINJAR Configurator.

Note:
When using LAN communication to control the NJR-P, the terminal software cannot be used.

3.2.1 Setting up LAN communication

Follow the procedure below.

(1) Connect the control device to the LAN connector of the NJR-P through a LAN cable.
(2) Start the IP-NINJAR Configurator in the control device.
(3) Send communication command from the Maintenance page of the IP-NINJAR Configurator.
You can control the NJR-P and get the status information using communication command.

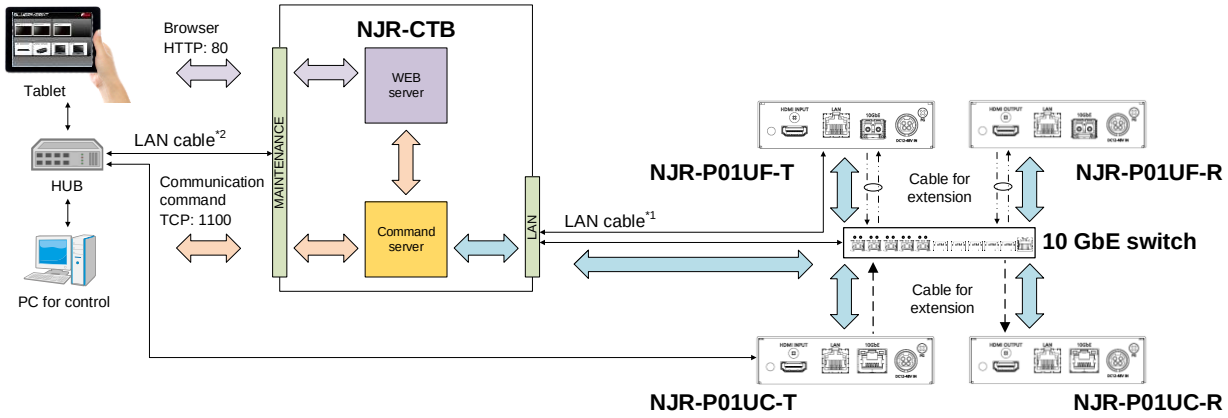
3.3 Controlled by NJR-CTB

Connecting a control device to the NJR-CTB's LAN connector enables system control and status queries per the Command List.

For operations from the NJR-CTB, refer to the Command Guide of NJR-CTB.



*1 The LAN connector of NJR-CTB should be connected to the LAN connector of NJR-P or the 10 GbE switch.
*2 PC for control should be connected to the MAINTENANCE connector of NJR-CTB or the LAN connector of NJR-P.

[Fig. 3.6] Controlled by NJR-CTB

3.4 Connecting LAN cable

When connecting a LAN cable to NJR-P/NJR-CTB, avoid making a network loop.

The NJR-P send broadcast packets periodically for the purposes of internal system management.
*A broadcast storm occurs when a network is overwhelmed by continuous broadcast traffic resulting in a network meltdown.

During installation, it is important to avoid the creation of network loops. Contact IDK if you require assistance with network implementation.

4 Command

4.1 Summary

A command consists of “@” (“40” in hexadecimal), 3 or 4 one-byte alphabetical characters (upper and lower cases) followed by parameters (one-byte numbers). For some commands, multiple parameter values can be specified. Processing is executed by sending a delimiter at the end of the command.

Example: @SDT,1,1,1,10000 ↵

“,” (a comma, “2C” in hex) is indicated between a command and parameter and between two parameters.
“↵” is indicated as a delimiter CR LF (return+line feed, “0D” and “0A” in hex).

■ **If an error occurs**:
An error response is returned if an undefined command or inappropriate parameter is included.

Example: @SDT,1 ↵
@ERR,1 ↵

■ **Using as HELP**
If only delimiter is sent, command list as the help command is returned.

Example: ↵
---------- HELP (1/2) ---------- ↵
(INPUT SETTING Command) ↵
@GDT / @SDT : Getting/Setting No-signal input monitoring ↵

4.4 Parameter input format

Parameter input formats are common for each setting.

If a command is input from the RS-232C connector of NJR-P or from the LAN connector using the IP-NINJAR Configurator (Software for setting IP-NINJAR), “1” fixed is specified to “ch” (channel) because only one NJR-P can be controlled.
If a command is input from the NJR-CTB, any channel can be specified because multiple NJR-P devices that are connected over a network switch can be controlled.

Example:

Format	@SAM, device, ch, port, mute ↵
Parameter	device: Model 1 = NJR-P01UF/C-T, 2 = NJR-P01UF/C-R
	ch: Channel 1 to 512 = Channel 1 to Channel 512 If a command is input from the RS-232C connector of NJR-P or from the IP-NINJAR Configurator, “1” is set (fixed).
	port: Connector “1” fixed
	mute: Audio mute 0 = Mute OFF [Default], 1 = Mute ON
